

# Health Choice MAINE

**The ACIP outlined notable reactions they intend to watch for in children.  
Meaning children have already had these reactions.**

## **VAERS prespecified adverse event of special interest**

- Death
- Acute myocardial infarction
  - Anaphylaxis
  - Cogulopathy
- Guillain-Barre Syndrome
  - Kawasaki Disease
- Myocarditis, Myopericarditis and Pericarditis
  - Narcolepsy
  - Seizure
  - Stroke
- Thrombosis with thrombocytopenia syndrome
  - Trans myelitis

**Schools will now offer, administer and incentivize this risky product. They will use children's innocence and drive to fit in against them. And against you, the par**

**Children have a  
0.00%-0.2%  
risk of severe illness or death.  
Less than 700 children  
have died with CV19 since  
Jan 2020**

## **Particular focus on myocarditis/myopericarditis reports**

- Potential reports identified by Medical Dictionary for Regulatory Activities (MedDRA)<sup>®</sup> standardized codes assigned to report that could indicate myocarditis or pericarditis
- Clinical abstraction
  - Review of initial report
  - Outreach to healthcare provider involved in reported patient's care
  - Request and review of medical records
  - Compare abstracted data elements against CDC case definitions for myocarditis and pericarditis
- CDC will conduct periodic analyses of case counts and reporting rates and comparison of reporting rates to background

**An EUA further restricts what  
vax reactions  
compensation can be claimed  
for. Since the program began,  
only 29 claims have been  
approved for compensation**

**Pfizer was granted EMERGENCY use authorization for Children.  
But WHERE is the emergency**
